

Sunday 11 October 2015, 11 p.m.

Post for the workshop on 'Alternative Open Access Publishing Models' organised by the European Commission in Brussels on October 12th 2015

<https://ec.europa.eu/futurium/en/content/what-future-open-access-publishing>

Diamond Open Access model

The group of mathematicians who wrote the declaration 'The Cost of Knowledge' (calling to boycott Elsevier) proposed in June 2012 the 'Diamond Open Access' model, where authors do not pay article processing charges (APCs) and keep their copyright (they license their papers under CC-BY), and journals do not belong to their publisher but to their board of editors. With such a model publishers are no more content owners but become service providers. Consequently boards of editors can choose where and under which conditions to publish their journal. Many journals already exist under this model and a new journal of mathematics 'Discrete Analysis' has recently been launched with this model.

Our group 'Cost of Knowledge' also asked that funding agencies do not pay APCs to publishers, but instead provide for free (to the peer-reviewed journals they select) editing and publishing platforms (developed in open source software). For more information about 'Diamond Open Access' and publishing platforms, see the links proposed below.

Unfortunately I cannot attend the workshop in Brussels because on October 12, 13, 14th I participate to another conference on open access in Paris (<http://jao2015.sciencesconf.org/resource/page/id/5>), where we will announce the platform Dissemin that is a new free service for 'Green Open Access' (<http://dissem.in>).
